✦ AI Overview

To store an object on MinIO using Node.js, you can use either the dedicated **minio** SDK or the **AWS SDK for JavaScript**, as MinIO is S3-compatible. The key methods for uploading are `putObject()` for streams/buffers and `fPutObject()` for local files. [↗](#)

Prerequisites

- A running MinIO server instance.
- Node.js installed.
- A MinIO access key and secret key. [↗](#)

Method 1: Using the **minio** SDK (Recommended)

This method uses the official MinIO client library for Node.js.

1. Install the SDK [↗](#)

bash

```
npm install minio
```

2. Initialize the client

In your Node.js file (e.g., `upload.mjs`), initialize the MinIO client with your server details.

javascript

```
const minioClient = new minio.Client({
  endPoint: 'localhost', // Your MinIO server hostname
  port: 9000,             // MinIO port (default is 9000 for HTTP, 9001 for HTTPS)
  useSSL: false,          // Set to true if using HTTPS
  accessKey: 'minioadmin', // Your access key
  secretKey: 'minioadmin' // Your secret key
});
```

3. Store an object

You can use `putObject()` to upload data from a `Stream`, `Buffer`, or `String`. 

javascript

```
import * as fs from 'fs';

const bucketName = 'my-test-bucket';
const objectName = 'path/to/my-object.txt'; // MinIO uses key names to simulate files
const metaData = {
  'Content-Type': 'text/plain',
  'X-Amz-Meta-Testing': 1234
};

// Example using a file stream
const fileStream = fs.createReadStream('/tmp/test-file.txt');
const fileStats = fs.statSync('/tmp/test-file.txt');
const objectSize = fileStats.size;

minioClient.putObject(bucketName, objectName, fileStream, objectSize, metaData, (err) => {
  if (err) {
    return console.log(err);
  }
  console.log('Object uploaded successfully, etag:', etag);
});

// For local files, fPutObject() is more convenient
/*
```

```
}  
  console.log('File uploaded successfully as object', objectName);  
});  
/  

```

Method 2: Using the AWS SDK for JavaScript v3

MinIO is compatible with the Amazon S3 API, so you can also use the AWS SDK.

1. Install the SDK

bash

```
npm install @aws-sdk/client-s3
```

2. Initialize the S3 Client

When configuring the client, you must specify the MinIO endpoint and set

```
forcePathStyle: true.
```

Both methods are effective for interacting with a MinIO server in a Node.js environment.
